

Spinal Care Bedding Co.
For the Best Sleep Ever

BOLSA™ FABRIC-ENCASED COIL
SOFT TO THE TOUCH BUT FIRMS WITH WEIGHT

Spinal Care™ 475 Support

Variable-rate coil geometry is the secret to **Bolsa's** unique support characteristics. Leggett & Platt's advancements in fine-wire technology allow the creation of specially designed springs that provide initial softness to the touch, but become firmer for needed support as weight is applied.

- The overall effect creates an initial softness and comfort followed by good, responsive support.
- Bolsa's individually fabric-encased coils help prevent partner disturbance and roll-together. They are naturally quieter, all adding up to an undisturbed and more peaceful night's sleep.
- Innersprings sleep up to 28% cooler than foam, according to research conducted by Kansas State University and the Institute of Environmental Research.

- Due to stress-relieving, the Bolsa innerspring unit will hold its designed shape, as does each individual coil in the unit, adding up to a more durable, longer-lasting sleep surface.
- We supply and control the high quality of our wire product from our own wire mills.

ACTIVE SUPPORT TECHNOLOGY®

The **Active Support Technology®** of innersprings relaxes your muscles during natural sleep movements, comforting and supporting your body during a good night's rest.

comfort core™

Bolsa™ is part of Comfort Core™, our line of fabric-encased coils.
